

HOW TO MAKE A PAPER SNOWFLAKE

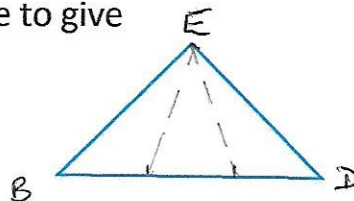

Take a square of paper.

Fold corner A to corner B along dotted line to give

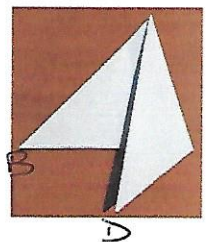

Fold corner C to corner D along dotted line to give

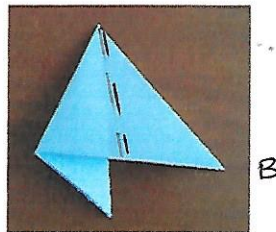

This is the tricky part. The triangle needs to be folded into thirds. This is a third of the angle at E.

Fold point D towards you to the left along the dotted line.

Don't crease too well as may need to adjust. Should look like this.

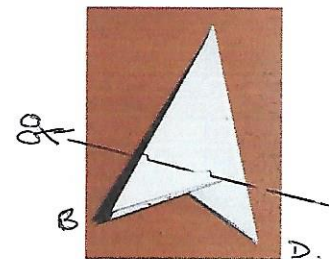

Turn over so it looks like this

Fold point B towards you along the dotted line.

Should end up with a shape like this

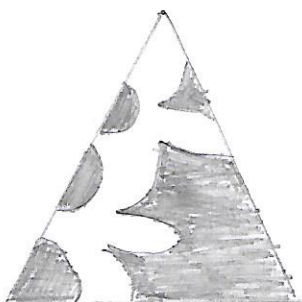

Now cut off the points B and D so that you have a triangle.

All the layers should be the same length.

Either draw on your pattern and cut or cut freehand. Then unfold to find your snowflake.

Here is an example of a pattern to cut. If you are struggling there are lots of videos on the internet and also templates for paper snowflakes.

Cut out the shaded area.
